

## **AquaCraft Revolt 30**

### **IMPORTANT:**

Your Revolt is a true racing boat. In our quest to provide you with the very best performance, we feel it is important to remind you that the water pickup that cools the electronics is located on the right side of the rudder blade. The reason it is mounted on the right is, in RC boat racing we take advantage of prop torque and turn right on the racing circuit (typically this is an oval course). **CAUTION:** Constantly turning left can cause a loss of cooling to the electronics and should be avoided.
