

How to update T16IZ SUPER

Your Futaba T16IZ SUPER transmitter programming can be updated easily online. When functions are added or improved, the update file can be downloaded from our website. Copy the update files to the microSD card and then use the following procedure to update the program. Check our web site for the FAQ regarding updating for more information.

Updating procedure

Note: If the battery fully discharges during program updating, updating will fail. When the remaining battery capacity is 50% or less, always recharge the battery before updating.

Note: The model data in the transmitter can be used unchanged after updating, but to be safe, back up the model data before updating.

1. Download the zip file of the update data from our website.

2. Extract the zip file on your computer.
3. The "FUTABA" folder will be created on your computer.
4. Copy the "FUTABA" folder into your microSD card.

Note: If the microSD card has already had "another FUTABA" folder before you make a copy, the "FUTABA" folder is OVERWRITTEN.

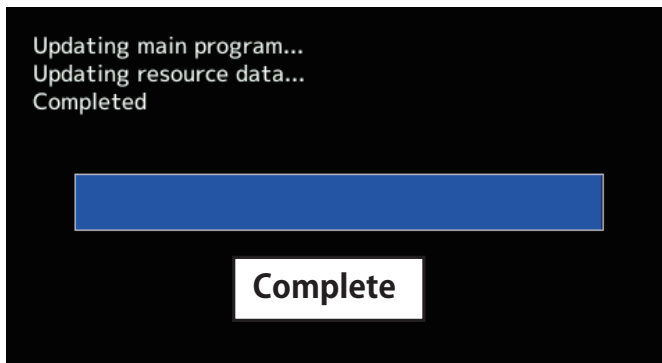

5. Insert the microSD card with "FUTABA" folder that contained the update software into the SD card slot on your T16IZ SUPER radio transmitter.

6. Turn on the transmitter power while pressing down the "HOME/EXIT" button. The update screen appears on the LCD display of your T16IZ SUPER and the software update is started.

7. When the software update is completed, "Completed" message is shown on the LCD display of your T16IZ SUPER. (Show below picture.)

8. Turn off the power switch of your T16IZ SUPER and remove the microSD card from the card slot.

Possible Problems

When one of the error messages shown below appears on the LCD screen your T16IZ SUPER, the software update will not be completed.

"Low battery."

Software update is postponed because of low battery. Retry the software update after the battery is recharged.

"Update file not found."

The T16IZ SUPER cannot find the update file on the microSD card. Check to be sure all the update files have been copied onto the microSD card.

"Broken file."

The T16IZ SUPER detects the update file error. The update file may be broken or for another transmitter.

"Write error."

The software update procedure is stopped for an unknown reason. Contact your local service center when this error message appears on the LCD screen of your T16IZ SUPER.

Don't absolutely remove the battery and the microSD card from the transmitter during the update.

There is a possibility that the transmitter will be damaged.

Recovering a failed update

If you failed to update for any reason, it may transmitter will not start.

In that case, please update again transmitter in the following procedure.

1. Remove the battery and then reconnect it.
2. Insert the microSD card that contained the update files to the transmitter.
3. Turn on the power to the transmitter while pressing down the "HOME/EXIT" button.
4. The update will start.

Even after the above steps, if the transmitter fails to update or does not start, please have it serviced.

This software updates or alters the functions and features noted below. The instructions and information that follow are meant as a supplement to the original instruction manual that accompanied the T16IZS transmitter. Please refer to the original instruction manual where applicable, but replace the steps indicated below with these instructions. Please check to ensure that the update has been installed.

- 1) Select the System Menu.
- 2) Touch the [Information] button.
- 3) Confirm that the information in the display indicates the version numbers as noted above.

1. The R3306GY now supports roll-flat functionality.

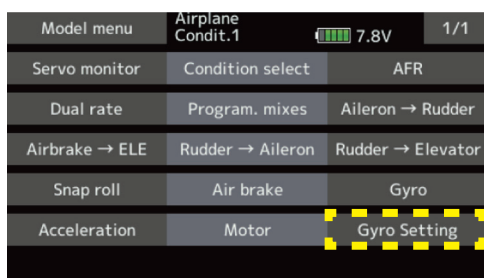

Roll-flat function switch settings for the R3306GY from the gyro setting screen.

*For details on the roll-flat function, refer to the R3306GY instruction manual.

- ① **Connect the R3306GY to the S.I/F connector.**

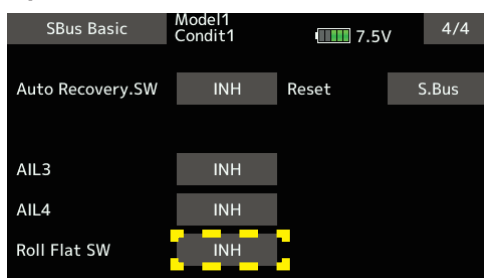

- ② **Open the [Gyro Settings] screen from the model menu and load the data.**

*Screen displays may vary depending on the device and settings.

- ③ **Open the [SBUS Basic] screen and set "Roll Flat SW".**

2. Updates have been added for the servos BLS-A600, HPS-A704, HPS-A703 and HPS-AA702.

Update the following servos. Refer to the servo update manual for update procedures.

- BLS-A600
- HPS-A704
- HPS-A703
- HPS-AA702

1. Added a warning message when changing the gyro servo type.

V11.0

1. GYA483 Airplane gyro support → Refer to T26SZ(PRO)/T16IZS-GYA483 Setting manual

* GYA573 gear (steering) gyro (RUD4) function is only compatible with the T32MZ and T26SZ series.
The T16IZS is not compatible.

V10.0

1. Failsafe Delay function newly added.

By connecting a receiver that supports the failsafe delay function, can turn the fail-safe delay function ON/OFF.

This function enables the servo movement softly toward the preset failsafe position when the failsafe activated.

Also when back to normal operation the servo movement softly back to the position of under controlled.

To enable this function, please go to Receiver Setting menu in the "System Menu" of the transmitter.

This delay function is valid for all channels set failsafe and not able to set each channel independently.

※ This function is valid for Battery Failsafe as well.

The receivers that support the failsafe delay function are as follows:

*The firmware update of the correspond receivers is necessary to use this function.

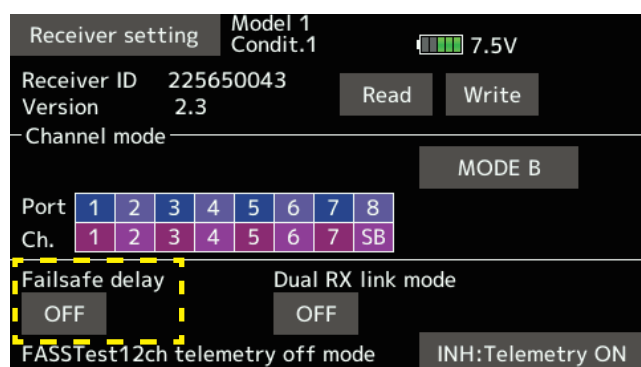

Receiver	Supported Versions
R7208SB R7308SB	V2.3~
R7206SB R7306SB	V1.3~
R7214SB R7314SB	V1.3~
R7201SB R7301SB	V1.4~

1. Connect the receiver's S.BUS2 port to the transmitter's S.I/F port with the receiver setting/update cable.

2. Tap [Receiver setting] on the [System menu]

3. Tap [Read]

4. Select ON/OFF for the Failsafe delay function.

*If you connect a receiver that does not support the failsafe delay function, you will not be able to operate the failsafe delay setting button.
Update your receiver to the latest version.

5. Tap [Write]

6. Remove the receiver.

V9.0

1. GYA573 Ver.6.x New firmware support → Refer to T26SZ/T16IZS_GYA573 Ver.6.x Setting manual

Added Vector Nozzle function for jet models.

Camber mixing setting rate has been expanded from ± 100 to ± 200 .

2. Supports the telemetry function of the O.S.ENGINE ECU EC-24/EC-23.

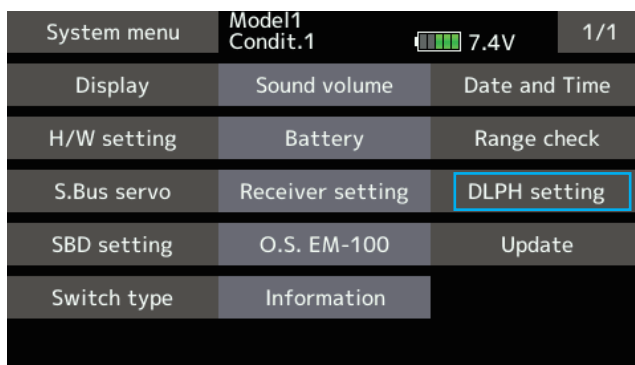

3. Now compatible with Power Hub DLPH-3.

By connecting the DLPH-3 to the transmitter, it is possible to change the mode of the DLPH-3.

- ① Connect the DLPH-3 to the transmitter as shown.

- ② Call up the System Menu → DLPH screen.

- ③ Tap [Read].

④ The version of the connected DLPH-3 is displayed.

If reading fails, the above message will be displayed. Check the connection.

⑤ Set the mode of the DLPH-3.

Tapping the Setting mode switches as follows:

[Dual Rx mode] → [Single Rx mode] →
[Airplane Gyro] → [Dual Rx mode] → ...

Tapping the PWM output mode switches as follows:

[1-10ch] → [11-20ch] → [21-24ch] → [1-10ch] → ...

Tapping the Battery type switches as follows:

[LiPo 2] → [LiFe 2] → [LiPo 3] → [LiPo 2] → ...

⑥ Tap Write, a confirmation screen will appear. Tap "Yes" to write the settings to the DLPH-3.

If writing fails, the above message will be displayed. Check the connection.

V8.0

1. GYA573 New firmware support. → Refer to T26SZ/T16IZ SUPER GYA573 Setting manual

V7.0

1. EC-22/EC-21 telemetry function added

Supports the telemetry function of the O.S.ENGINE ECU EC-22/EC-21.

2. Sound switch, voice notification German language support

The sound switch function and voice notification function now support German. (German version only)

V6.1

1. Fixed the telemetry speech of SBS-01ML.

V6.0

1. GYA553 New firmware Version 4.x support. → Refer to T16IZ/T16IZ SUPER GYA553 V4 Setting manual
2. Some of the audio for “Sound Select” has been revised.

V5.0

1. CGY770R support. → Refer to T16IZ/T16IZ SUPER CGY770R Setting manual
2. Added confirmation dialog for group setting button of condition

A confirmation screen will appear when switching between Group [Gr.] and Single [Sngl].

Tap [Yes] to switch.
Tap [No] to not switch.

3. Added power off confirmation function

System menu → [H/W setting]

Turn on the power off confirmation, a confirmation screen will be displayed before the power is turned off.

Tapping “Yes” will turn the power off.
Tapping “No” will not the power off.

1. Receiver setting : It is now possible to connect a compatible receiver to the S.I/F port of the transmitter and configure the receiver settings.

Compatible receivers are as follows. (As of January 2024)

- R7208SB/R7308SB (Compatible with software version 2.0 or later)
- R7206SB/R7306SB
- R7214SB/R7314SB

① Connect the **S.BUS2 port** of the receiver and the **S.I/F port** of the transmitter with a cable.

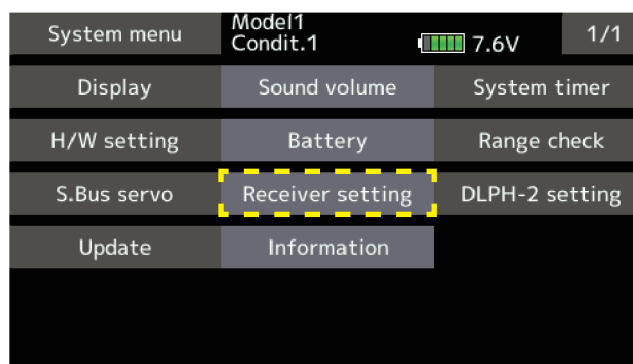

② Turn on the power switch while pressing the **U.MENU/MON** button on the transmitter.

*For safety reasons, receiver settings cannot be made while radio waves are being transmitted.

③ Tap **[Receiver setting]** on the **System menu**.

④ Tap [Read].

Receiver setting	Model1 Condit.1	7.6V
Receiver ID	-----	Read Write
Version	00.000	
Channel mode	---	
Port		
Ch.		
Dual RX link mode	---	
FASSTest12ch telemetry off mode	---	

⑤ The receiver settings will be displayed. The displayed contents vary depending on the model.

Receiver setting	Model1 Condit.1	7.7V
Receiver ID	225950010	Read Write
Version	2.0	
Channel mode	MODE B	
Port	1 2 3 4 5 6 7 8	
Ch.	1 2 3 4 5 6 7 SB	
Dual RX link mode	OFF	
FASSTest12ch telemetry off mode	INH:Telemetry ON	

⑥ Make the necessary receiver settings.

Changing receiver channel output mode
MODE A → MODE B → MODE C · · · MODE A

Dual RX link mode
[OFF ⇄ ON]

[INH : Telemetry ON]
[ACT : Telemetry OFF]

⑦ Tap [Write]. → Receiver settings will be changed.

Receiver setting	Model1 Condit.1	7.7V
Receiver ID	225950010	Read Write
Version	2.0	
Channel mode	MODE B	
Port	1 2 3 4 5 6 7 8	
Ch.	1 2 3 4 5 6 7 SB	
Dual RX link mode	OFF	
FASSTest12ch telemetry off mode	INH:Telemetry ON	

* T16IZS cannot operate after 17ch.

⑧ Remove the receiver from the transmitter.

2. DLPH-2 setting : It is now possible to connect a DLPH-2 to the S.I/F port of the transmitter and configure the DLPH-2 settings.

- ① Connect the power supply to the BAT.1 or BAT.2 port of DLPH-2.
- ② Connect the **RX1 port** of the DLPH-2 and the **S.I/F port** of the transmitter with a cable.

- ③ Turn on the power switch of DLPH-2.
- ④ Tap **[DLPH-2 setting]** on the **System menu**.

- ⑤ Tap **[Read]**.

- ⑥ The DLPH-2 settings will be displayed.

- ⑦ Configure the DLPH-2.

Dual RX mode → Single RX mode → Airplane gyro mode → Dual RX mode → ...

1-16CH + DG1,DG2 → 17-24CH + DG1,DG2 → 1-16CH + DG1,DG2 → ...

Mode selection

*When setting mode is set to **[Airplane gyro mode]**, PWM output mode is fixed to **[1-16CH + DG1,DG2]**.

* T16I2S cannot operate after 17ch.

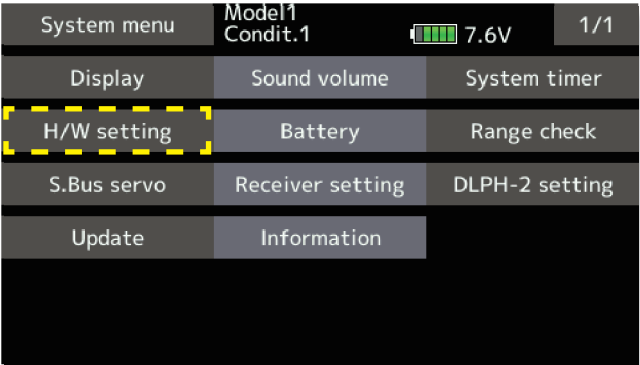

⑧ Tap **[Write]**. → DLPH-2 settings will be changed.

⑨ Remove DLPH-2 from the transmitter.

3. Added switch identification function : On the hardware selection screen, operate the desired toggle switch and it will be automatically selected.

① Tap [H/W setting] on the System menu.

② Setting [Switch identification] to [ON] enables the switch identification function. Set to [OFF] to disable the switch identification function.

③ Call the [Hardware select] screen from the settings screen for each function.

④ Operate the toggle switch (either SA to SH) to assign.

⑤ The operated switch is selected. Sets the current switch position to ON. Operating the switch changes the ON position.

1. Switch Sounds : The Sound select function adds sounds to switch positions.

(Only English sounds are supported.)

- Tap the [Sound Select] button in the linkage menu to call the setup screen shown at the right.
- Take notice of the SW Letter and position
- Tap the desired switch position.

Sound Select		Model1 Condit.1	 7.5V	1/2
	Up	Center	Down	
SA	----	----	----	
SB	----	----	----	
SC	----	----	----	
SD	----	----	----	

- Tap on the desired sound to add the requested sound in the previously selected switch position. (It will demo the sound once pressed)

Sound Select		Model1 Condit.1	 7.5V	1/6
----	Airbrakes Open	Armed		
3D Rates On	Airbrakes Closed	Bombs Away		
3D Rates Off	Airbrake	Bombs Released		
Aileron Low	Airbrake On	Brakes On		
Aileron Medium	Airbrake Off	Brakes Off		
Aileron High	Arm Motors	Butterfly On		

NOTE: Sounds and switch positions do not acknowledge condition priority.

Sounds are intended as a reference for changes in flight profile and will need to be changed manually if programming deviates from previous setup.

2. Sound notification: It is possible to notify the operating status of the transmitter by voice, such as ON/OFF of various mixing functions.

(Only English sounds are supported.)

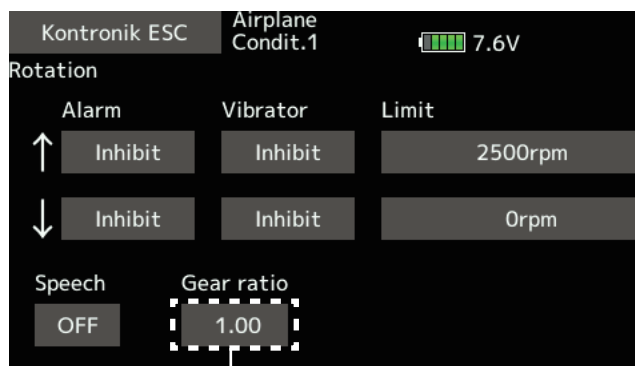

- Tap the [Warning Setting] button in the linkage menu to call up the warning settings screen.
- Display the second page and call up the settings screen below.

- Tap the [Sound notification] setting button to turn the sound notification function ON/OFF.
- If you set the sound notification function to ON, you will be notified by voice when the ON/OFF status or condition of various mixing functions changes.

NOTE: Condition audio notifications use standard condition names. Please note that if you change the condition name or rearrange the priority order, the audio notification and display will no longer match.

3. Telemetry settings: Added gear ratio setting button to Kontronik ESC and Scorpion ESC.

● If the gear is down, enter the gear ratio to display the helicopter rotor speed and the airplane gear down propeller speed.

4. Telemetry settings: Changed the motor pole number setting for each ESC to "100".

Previously, the number of poles was up to 36, but now it can be set up to 100.

● Enter the number of poles for your motor.

V2.1

1. Bug fix for European T16IZ SUPER [For Europe only]

Fixed an issue where communication became unstable when operating another transmitter at a short distance when using the T16IZ SUPER sold in the European region. This problem is ONLY when you use T16IZ SUPER under S-FHSS mode.

*T16IZ SUPER sold outside Europe does not have the above problem. Also, T16IZ does not have the above problem.

V2.0

1. Receiver or gyro updates

By connecting a receiver or gyro that supports updates to the S.I/F connector of the transmitter, it is possible to update their software.

- ① Download the update file of the update data from Futaba website.
- ② Extract the update file on your computer. The "FUTABA" folder will be created on your computer.
- ③ Copy the "FUTABA" folder into your microSD card.
- ④ Insert the microSD card with "FUTABA" folder that contained the update software into the SD card slot on your transmitter.
- ⑤ Turn on the transmitter and call "System Menu" ⇒ "Update".

- ⑥ Select the product to update.

*Conventional Servo Update and Sensor Update screens open from this screen.

- ⑦ Select the product name to update.

- ⑧ The update screen is displayed. Connect the receiver or gyro to be updated to the S.I/F connector of the transmitter, prepare for update, and then tap the [Update] button.

- ⑨ Update start.

- ⑩ When finished, the following will appear.

- ⑪ Disconnect the receiver or gyro from the transmitter's S.I/F connector.

V1.2

1. GYA553 New firmware Version 3.x support. → Refer to T16IZ/T16IZ SUPER GYA553 V3 Setting manual

Airplane Gyro GYA553 is compatible with 3rd aileron and 4th aileron.
